In this article, we will discuss the features of AutoCAD, the tools of AutoCAD, how to use AutoCAD, what is the difference between AutoCAD 2015 and AutoCAD 2018, to what version you should upgrade. AutoCAD is a comprehensive and powerful commercial drafting software program that contains a variety of functional tools to draw 2D and 3D technical drawings and professional-quality architectural designs. AutoCAD is a feature-rich and powerful commercial drafting program for drawing technical drawings and architectural designs. AutoCAD is one of the most powerful and complete 2D and 3D CAD software applications available for Windows. Unlike many other commercial CAD programs, which are developed to run on Unix or Macintosh operating systems, AutoCAD is developed for Windows and runs on Windows computers. The latest version of AutoCAD (AutoCAD 2018) has more functions and improved performance than AutoCAD 2017, which is considered one of the best CAD programs on the market. It contains a powerful feature set that lets users to perform basic drawing functions and advanced drafting tasks easily. It also provides powerful 3D modelling tools, making it a very flexible and powerful tool for engineers, architects, and drafters. AutoCAD is a Microsoft Windows application, however, its source code is also available for users who wish to install it on macOS and Linux operating systems. AutoCAD has been updated every few years in order to bring new features and improve the performance of the software, but if you have a licence for the previous version (AutoCAD 2015 for example), you will be able to use it to create technical drawings or architectural designs, even though the user interface may be outdated and

Replacing the ObjectARX interface is the Open ObjectARX, which is an open source reimplementation of the AutoCAD Crack For Windows ObjectARX API. Graphical In the beginning, the AutoCAD program used an X11 graphical user interface; but with the release of AutoCAD 2004, Microsoft Windows GDI+ technology was used. Since AutoCAD 2014, the Windows GDI+ is superseded by an integrated Windows Presentation Foundation (WPF) graphical user interface. Version history Macintosh AutoCAD began on the Macintosh in 1987. The first version released for Macintosh was version 3.0. The standard Macintosh OS 3 operating system supported running AutoCAD. With the release of AutoCAD 2002, object selection was added to the program, and the next version (AutoCAD 2000), released in 1992, supported object selection and also linked dimensions, sections and surface patches. Before version 2, version 1 was the previous version of AutoCAD, which had features only slightly less than the latest version. Version 1, released in 1989, supported lines, polylines and arcs only. Versions 3 and 4 were the first versions of AutoCAD to support dxf files, and were released in 1990 and 1992 respectively. AutoCAD 2000, released in 1993, was the first version to include the native desktop publishing features of Microsoft Office 97. AutoCAD 2002, released in 1995, included the capability to open native dxf files, with the ability to translate the dimensions and drafting rules to the native AutoCAD system. It also included the abilities to create and edit shapes with the graphics interface, to work with the BIM Interchange file format, and to accept CADOT programming language scripts. AutoCAD 2003, released in 1997, was the first version to include the ability to create AutoLISP programming code, called Autocad IntelliCode, for use with the AutoCAD programming language. With the release of AutoCAD 2004, native support for dxf files was removed and the user interface was redesigned for enhanced user experience. The AutoCAD native file format changed from.dwg to.dxf. This version, released in 2004, also marked the first appearance of the ability to open native.dwg files. AutoCAD 2007, released in 2006, included native support for.dwg files, and marked the first major redesign of the user interface since a1d647c40b

Income inequality in the United States has continued to skyrocket, according to a new study from the Institute for Policy Studies. The most telling chart? The top 1% of earners in the U.S. have a higher percentage of the nation's total income than the bottom 90% combined. The findings come from the latest version of the U.S. Census Bureau's income distribution report, the "Current Population Survey Annual Social and Economic Supplement," which also found that a third of American households – 47 million in total – lived in poverty.

ADVERTISEMENT The report also found that income for the bottom 90% of U.S. households fell between 2009 and 2013, despite the introduction of the federal Affordable Care Act, commonly known as "Obamacare." It found that the bottom 90% of households saw their median income fall to \$24,389, a 1.6 percent decrease from \$24,570 in 2009. During the same period, the median income for the top 1 percent rose 8.6 percent to \$1,617,250. "Americans are enduring nearly a decade of weak income growth," IPP Vice President of Programs and Policy Rebecca Smith said in a press release. "After a brief decline, median income for the bottom 90 percent has resumed its steep descent." The average income for the bottom 20% of earners – those who make \$17,979 or less – fell 0.4 percent between 2009 and 2013. The same was true for the top 5 percent, whose income grew 0.4 percent. Smith said that income inequality in the U.S. is "near an all-time high," noting that in 2012, the top 1 percent earned 19 percent of the total national income. ADVERTISEMENT She added, "Income inequality is part of a larger issue of growing economic instability for the majority of Americans." "America's economic and political power is still largely built on a mythology of universal prosperity and economic security," Smith said. "But that mythology has eroded substantially as a result of the continued growth of inequality." Among the top 1 percent, only the top 50 households saw income increases in 2013. The number of households in the top 1 percent has been rising steadily since 2009. ADVERTISEMENT Smith said the recent spate of income inequality in the
